

10. Document ST/SG/AC.10/R.129 - proposed changes to the entries for Asbestos.

The proposals in this paper were modified in a paper without official symbol and the working group mainly considered the latter document. The working group recommends the following changes to chapter 2:

"UN No. 2212 Blue asbestos (crocidolite) or Brown asbestos (amosite, mysorite)
Class 9 PG II"

"UN No. 2590 White asbestos, includes all types other than crocidolite, amosite or mysorite Class 9 PG III"

Add to UN No. 2590 a new Special Provision reading:

"Asbestos which is immersed or fixed in a natural or artificial binder material (such as cement, plastics, asphalt, resins or mineral ore) and manufactured articles containing asbestos are considered non-dangerous for transport".

The working group agreed, with one member opposing, that this Special Provision should also apply to UN No. 2212.

11. Document ST/SG/AC.10/C.2/R.434 - proposed the addition of control temperatures to certain inflammable solids. The working group determined that the problem addressed was one of quality and not of safety also it only concerned the sea mode. The working group recommends that no action be taken.

12. Document ST/SG/AC.10/C.2/R.445 - concerned nitrate fertilizers of Class 5.1 but did not contain any positive proposals. The working group recommends that this be considered during the next work cycle.

13. Document ST/SG/AC.10/C.2/R.448 - paragraph 3 concerned the definition of UN No. 2344. The working group recommends the following change in chapter 2 and table 12.2:

"UN No. 2344 2-Bromopropane"
